# The schl package\*

Tassos Tsesmetzis ttsesmetzis@gmail.com

November, 2019

#### Abstract

schl is a XHTEX package that provides commands and environments suitable for document types that appear in a classroom environment. It's development is based on the Greek school practice, but it may be usefull in other contexts also.

## 1 Introduction

Worksheets and tests are common document types in a classroom. schl package comes with macros that facilitate the creation of these documents. It has list environments for questions, exercises and tasks. Other environments of the package can be used for tickable or multiple choice answers. There are also commands for typesetting solutions, hints and answers to exercises.

Furthermore, you can set the name of the teacher, subject, grade, headmaster, school, date, school year and use these to print school's logo or information about an exam. schl has commands to typeset headers for each document type, a macro for typing the points of an exercise and two commands for blank space. There is also a macro for typesetting a wish for good luck!

By default, schl prints all macros that accept text as undefined. As of this version (v1.0), Greek is the only supported language. You can set it with the option greek. Other languages can be supported by redefining package's internal macros.

schl loads the packages fontspec, enumitem, mdframed and amsmath. It is written for  $X_1 \to T_E X$ , but can be used by any system that supports fontspec.

## 2 Macros

## 2.1 Blank space

\lowerdots \blankspace

Usually, we need to designate blank space in a document. schl package has two

<sup>\*</sup>This document corresponds to schl v1.0, dated 2019/11/07.

commands for this. The first one \lowerdots [ $\langle length \rangle$ ] { $\langle number \rangle$ }, prints  $\langle number \rangle$  dots. Optional argument  $\langle length \rangle$  sets the deviation from base line. It's default value is -0.3ex.

```
1 \newcommand\lowerdots[2][-0.3ex]{%
2 \begingroup
3 \lccode`m=`.\relax
4 \raisebox{#1}{\lowercase\expandafter{\romannumeral\number\number#2 000}}%
5 \endgroup
6 }
```

\blankspace  $[\langle length \rangle]$  {\langle linelength \rangle} prints a line with length \langle linelength \rangle. The optional argument is the deviation from the base line and it's default value is -0.3ex. \schl@rulethickness is the default thickness for all \blankspace lines.

```
7 \newcommand\blankspace[2][-0.3ex]{%
8 \raisebox{#1}{\rule{#2}{\schl@rulethickness}}
9 }
```

#### 2.2 Lists

schl package defines seven types of lists. These are question, exercise, schltask, multichoice, tickchoice, truefalse and matchique. tickchoice comes also with a stared version tickchoice\*. All of them depend on the package enumitem.

question exercise schltask

These environments are enumerate-like lists. List's \item is of the form  $\langle type \rangle$   $\langle counter \rangle$ , where type is \question@term for question, \exercise@term for exercise and \task@term for schltask.  $\langle counter \rangle$  is the internal counter of the environment.

```
10 \newlist{question}{enumerate}{1}
11 \setlist*[question] {%
12 align=left,
13 label=\normalsize\bf \question@term\ \arabic*.,
14 wide,
   leftmargin=Opt,
   labelindent=0pt
16
18 \newlist{exercise}{enumerate}{1}
19 \setlist*[exercise] {%
20 align=left,
21 label=\normalsize\bf\exercise@term\ \arabic*.,
22 wide,
23 leftmargin=Opt,
24 labelindent=Opt
26 \newlist{schltask}{enumerate}{1}
27\setlist*[schltask]{%
28 align=left,
29 label=\normalsize\bf\letterspace{\defaultletterspace}\task@term\ \Alph*,
30 wide,
31 leftmargin=Opt,
32 labelindent=Opt
```

33 }

\letterspace

The macro \letterspace{ $\langle number \rangle$ } is used to set the horizontal space of adjacent characters in a word. It is based on the \addfontfeature macro from the package fontspec. The argument  $\langle number \rangle$  is a percentage of the font size. In schl package is used to set the space between capital word letters.

```
34 \def\letterspace#1{\addfontfeature{LetterSpace=#1}}
```

multichoice

The multichoice environment is used to typeset multiple choice answers.

```
35 \newlist{multichoice}{enumerate*}{1}
36 \setlist*[multichoice]{
37    labelindent=\parindent,
38    label=\Alph*.,
39    itemjoin=\hspace{\fill},
40    before=\hspace{\fill},
41    after=\hspace{\fill}
42}
```

tickchoice
tickchoice\*

The environments tickchoice and tickchoice\* are variants of the itemize list. For both cases, each item is preceded by a square. tickchoice stacks items vertically,

```
43 \newlist{tickchoice}{itemize}{1}
44 \setlist[tickchoice]{labelindent=\parindent,label={\large$\square$}}
```

while tickchoice\* stacks them horizontally.

```
45 \newlist{tickchoice*}{itemize*}{1}
46 \setlist*[tickchoice*]{
47   labelindent=\parindent,
48   label={\large$\square$},
49   itemjoin=\hspace{\fill},
50   before=\hspace{\fill},
51   after=\hspace{\fill}
```

truefalse

truefalse is a variant of the enumerate environment. Each \item is divided in two parts. The first part is the text that follows the \item macro. The second part is a \parbox that prints \trueabbr@term and \falseabbr@term.

```
53 \newlist{truefalse}{enumerate}{1}
54\setlist[truefalse]{label={\bf \arabic*.},%
55 before*={%
      \let\defaultitem\item%
                                  Save the standard definition of \item in a macro.
56
                                           Set the first toggle with initial value true.
57
      \toggletrue{first}%
58
      \def\item{%
        \iftoggle{first}{%
60
          \togglefalse{first}%
                                             Set the first toggle to take the value false.
          \defaultitem\begin{minipage}[t]{0.8\linewidth minus \truefalselength}%
61
62
          \end{minipage}\hfill\truefalselabel\defaultitem%
63
          \begin{minipage}[t]{0.8\linewidth minus \truefalselength}%
64
65
        }% new, temporary defition of \item
66
     },
67
```

```
after*={% This takes care of adding the fill for the final item on
the list and just makes sure that \item is reset to its standard definition
\text{\text{end}{\minipage}}\hfill\truefalselabel% fill for final item in list
\text{\text{ltem}defaultitem% restore standard definition of \item
\}%
}%
```

matchingque

The macro \matchingque{ $\langle CSV \rangle$ }{ $\langle CSV \rangle$ } is used to typeset matching questions.  $\langle CSV \rangle$  are comma separated values. The  $\langle CSV \rangle$ s of the first argument are the parts of the matching questions that will be print in the left column. Similarly, the  $\langle CSV \rangle$  of the second argument are going to be printed on the right column of the matching questions.

```
74 \newcommand\matchingque[3][300pt]{%
    \begin{center}
75
      \parbox[c]{#1}{
76
77
        \parbox[c]{\leftmatchwidth}{%
78
           \begin{leftmatching}
79
             \@for\tmp:=#2%
80
             \do{%
             \item \tmp
81
            }
82
           \end{leftmatching}
83
        }\hfill%
84
85
        \parbox[c]{\rightmatchwidth}{%
           \begin{rightmatching}
86
             \@for\tmp:=#3%
87
             \do{\%}
88
89
             \item \tmp
90
            }
91
           \end{rightmatching}
92
93
    \end{center}
94
```

leftmatching rightmatching

Environments leftmatching and rightmatching are used to typeset each column in  $\mbox{\sc matching}$  que.

```
96 \newlist{leftmatching}{enumerate}{1}
97 \newlist{rightmatching}{enumerate}{1}
98 \setlist*[leftmatching]{label=\bf\Alph*.}
99 \setlist*[rightmatching]{label=\bf\arabic*.}
```

## 2.3 Answers, solutions and hints

\answer

Macro \answer{ $\langle text \rangle$ } prints (\answerabbr@term \meta{text}) at the right end of the current line.

```
100 \newcommand\answer[1]{%
101 \hfill{\footnotesize (\answerabbr@term: #1)}
102 }
```

\solution

Macro \solution{ $\langle text \rangle$ } is used to typeset the solution of an exercise.

```
103 \newcommand\solution[1]{%
                     \par\noindent\phantom{.}\nfill\textbf{\solution@term}\nfill\phantom{.}\par%
                     \noindent #1
                105
                106 }
        \hint
                    schl provides the macro \left( \left( text \right) \right) for typesetting exercise hints.
                107 \newcommand\hint[1] {%
                     \par{\scriptsize\noindent\textbf{\hint@term:} #1}%
                109 }
                    A feature of homework assignments is a deadline date. \langle date \rangle prints
   \deadline
                 \deadline@term followed by argument \langle date \rangle.
                110 \newcommand\deadline[1]{%
                     \noindent{{\bf\normalsize\deadline@term}: #1}
                112 }
                    Add a remark in a document. \ prints \ prints \ followed by
      \remark
                argument \langle text \rangle.
                113 \newcommand\remark[1]{%
                     \noindent{\textbf{\normalsize\remark@term}: #1}
                115 }
   \reminder
                    Add a reminder in a document. \mbox{reminder}(\mbox{\it text}) prints \mbox{\it reminder}(\mbox{\it @term}) followed
                by argument \langle text \rangle.
                116 \newcommand\reminder[1] {%
                     \noindent{\textbf{\normalsize\reminder@term}: #1}
                118 }
                2.4 Titles and headers
                    Common document types in a school environment are the worksheet, various tests
    \heading
                and final written exams. The macro \heading{\langle text \rangle} gives a generic header for all
                these documents.
                119 \newcommand\heading[1]{%
                     \begin{center}
                120
                121
                        {\bf\large #1}
                     \end{center}
                    Macro \worksheethd{\langle text \rangle} sets the title of a worksheet. It appends \langle text \rangle to
\worksheethd
                 \worksheet@term.
                124 \newcommand\worksheethd[1] {%
                     \heading{\worksheet@term\ #1}
                125
                126 }
                     \ensuremath{(text)} = {\langle text \rangle} is used to set the title of tests. The optional argument has
      \examhd
                the default value \termtest@term.
                127 \newcommand\examhd[2] [\termtest@term] {%
                     \heading{#1 #2}
                128
                129 }
```

```
\finalexamhd
                     Titles for end year exams have a standardized form in Greek schools. \exams@term
                 is followed by information about the exam. Then comes \period@term with the exam
                 period after it. finalexamhd{\langle info\rangle}{\langle period\rangle} is used for these cases.
                 130 \newcommand\finalexamhd[2]{%
                      \heading{\letterspace{\defaultletterspace} #1 \exams@term\\[0.5ex] \period@term\ #2}
                 132 }
                     \schl@framedbox
                 \theorypart and \exercisepart.
                 133 \newcommand\schl@framedbox[1]{%
                      \begin{center}
                        \fbox{\large{\bf\letterspace{\defaultletterspace} #1} }%
                 135
                      \end{center}
                 136
                 137 }
                     Sometimes theory and exercise sections constitute a written test. Macros \theorypart
   \theorypart
  \exercisepart
                 and \exercisepart print headers for those parts.
                 138 \newcommand\theorypart{%
                      \schl@framedbox{\theoryheader@term\!}
                 140 }
                 and
                 141 \newcommand\exercisepart{%
                      \schl@framedbox{\exerciseheader@term\!}
                 143 }
                 2.5 School information
        \school
                     \headmaster
                  \grade{\langle text \rangle}, \schoolyear{\langle year \rangle}, \setdate{\langle date \rangle}, \examtime{\langle time \rangle} define
                 and set the value of internal macros.
       \teacher
       \subject
                 144 \newcommand\school[1]{\def\schl@school{#1}}
         \grade
                 145 \newcommand\headmaster[1] {\def\schl@headmaster{#1}}
    \schoolyear 146 \newcommand\teacher[1] {\def\schl@teacher{#1}}
       \setdate 147 \newcommand\subject[1] {\def\schl@subject{#1}}
      \examtime 148 \newcommand\grade[1] {\def\schl@grade{#1}}
                 149 \newcommand\schoolyear[1] {\def\schl@schoolyear{#1}}
                 150 \newcommand\setdate[1]{\def\schl@date{#1}}
                 151 \newcommand\examtime[1]{\def\schl@examtime{#1}}
                     In a similar vein, \authorityi\{\langle text \rangle\}, \authorityii\{\langle text \rangle\} and \authorityiii\{\langle text \rangle\}
   \authorityi
                 define the internal macros \schl@authorityi, \schl@authorityii and \schl@authorityiii.
  \authorityii
  \authorityiii
                 152 \newcommand\authorityi[1]{\def\schl@authorityi{#1}}
                 153 \newcommand\authorityii[1] {\def\schl@authorityii{#1}}
```

#### 2.6 Other macros for tests

\points \points  $[\langle macro \rangle] \{\langle number \rangle\}$  is used to designate the points of an exercise.

154 \newcommand\authorityiii[1]{\def\schl@authorityiii{#1}}

```
\{\langle number \rangle\} is the number of points for the current exercise, while [\langle macro \rangle] can be
                    used to control the space just before the points.
                    155 \newcommand{\points}[2][\hfill]{%
                    156 #1(\textbf{\footnotesize \points@term{#2}\ #2})
                         \left( \left( text \right) \right) prints \left( text \right) prints \left( text \right).
      \fullname
                    158 \newcommand\fullname[1]{%
                          \noindent{\normalsize\fullname@term :} #1
                    160 }
     \datefield
                        Similarly, \forall \text{datefield}\{\langle \text{text}\rangle\}\  prints \forall \text{date@term}\  with \langle \text{text}\rangle\  after it.
                    161 \newcommand\datefield[1][0]{%
                          \noindent{\normalsize\date@term :}
                    163 }
       \getdate
                         \getdate prints \schl@date. The last macro can be set with \setdate.
                    164 \newcommand\getdate{%
                    165
                          {\noindent\schl@date}
                    166 }
                         \displaystyle \operatorname{duration}(\langle duration \rangle)  prints \displaystyle \operatorname{duration}(\partial term with \langle duration \rangle)  after it.
      \duration
                    167 \newcommand\duration[1]{%
                          \noindent{\normalsize\textbf{\duration@term}: #1}
                    169 }
                         \schoollogo{\langle width \rangle} prints \schl@school, \schl@grade, \schl@subject
   \schoollogo
                    and \schl@teacher. \langle width \rangle is the length of the \parbox.
                    170 \def\schoollogo#1{%
                          \parbox[t]{#1}{%
                             \schl@school\\%
                    172
                             \schl@grade\\%
                    173
                            \schl@subject\\%
                    174
                            \schl@teacher
                    175
                    176 }
                    177 }
                         \arrowvert authoritylogo[\langle number
angle] prints\sch@authorityi, \sch@authorityii, \sch@authorityiii
\authoritylogo
                    and \schl@school. Argument \(\lambda number \rangle\) is a multiplier for \baselineskip. This
                    spaces is added above macro.
                    178 \newcommand\authoritylogo[1][1.5]{%
                    179

                198 }
  \examdetails
                Written exam documents contain information about the period of the exam, subject,
                grade, writer of the test, supervisors of the exam and date. schl package has the macros
\examdetailsii
                \ensuremath{\mbox{\tt dexam}} and \ensuremath{\mbox{\tt detailsii}} for printing this information. Argument
                \langle text \rangle of \examdetails is the exam period.

                  Some types of written tests end with the names of the headmaster and the teacher(s)
\signatures
              followed by handwritten signatures. \signatures [\langle role \rangle] \{\langle signer(s) \rangle\}\ prints the name(s)
              of the \langle signer(s) \rangle under a line with the \langle role \rangle of the signer(s). \signatureslength is
              the length of the \signatures block.
